CODEBOOK – WAVE 1
October 27, 2017

Principal Investigator: Claude Fischer
Director: Leora Lawton

General Notes and Advisements:

1. This codebook covers the Respondent (main) file and the attributes of the named alters. Part I is the main file variables, and Part II is the named alters.
2. This codebook should be used together with the wave 1 instrument/questionnaire to read the full texts of the questions and – importantly – to understand the skip patterns in the survey (and therefore to understand the nature of missing data in the answers—i.e., not applicable versus not answered).
3. Missing data are indicated in various ways, depending on the question sequence and mode (in-person or web), whether the variable is numeric or string, and whether the respondent was offered a missing option such as "don't know". Missing data can be blank, "." ".e," ".n," ".d,", or a user-specified code (often 8, 9, or 99); it is important to examine the variables and questionnaire in order to ascertain. In the frequency tables "Missing--System" refers to missing data coded blank or "." (depending on software program).
4. Variables with more than 33 values were not included in the codebook frequencies, but placeholders are included for your reference. They are in **purple font**.
5. Variable names in the main survey (e.g., a2a, g13a, h12) generally designate sections of the instrument. However, do not assume they are in exact sequence. (Some were moved around or inserted over the course of instrument development and some were dropped.)
6. Actual alter names do not appear here or in the Names file for confidentiality purposes—only ID numbers.
7. Some open-ended questions have been suppressed because too many respondents provided identifying information in their answers. Placeholders are included for your reference. They are in **green font**. For other open-ended questions, a limited number of cases have been edited for similar reasons, e.g., <alter> instead of a personal name.
8. The Frequencies include the variable name and label, e.g., 'mode' is the variable name and 'FTF vs Web' is the label.
9. Variables with an 'sc' prefix are screener questions. Not all screener questions are included in the main file as most were for identification of the targeted age groups and for random selection.
10. Variables with an 'ho' prefix are items queried of interviewers about the respondent's home.
11. Variables with an 'in' prefix are items queried of the interviewers about the respondent behavior.
12. Answer categories labeled "Volunteered" apply to in-person interviews.
13. Corrections of the data continue. Please let us know of errors that you find.

TABLE OF CONTENTS

PART I: Main File (Ego) Variables

Prim_key: Primary Key – Unique Identifier of Respondent
Note: Prim_key values beginning with 8 designate either referral or Facebook samples rather than the household address samples.

mode FTF vs Web

Notes: (1) intent_mode (below) codes the randomly-assigned mode; (2) All Facebook recruits were assigned to the online survey. Analyses of the mode assignment should take that into account.

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	1 1 Face-to-face	647	55.8	55.8	55.8
	3 3 Self-administered	512	44.2	44.2	100.0
	Total	1159	100.0	100.0

b2a_count "number of named to social activity"

Note: This variable and the other ones like it are based on the number of answers respondents gave to the question, uncorrected (as of 10-2017) for errors (e.g., listings such as "my family"). Although the error rate is quite low, a more precise count can be obtained by aggregating the count from the Names file. (For example, for 1.2% of respondents the aggregated count is one fewer than this count; for 0.4% of respondents, it is two or three fewer. In the case of the next name-eliciting question, b4a, the discrepancy is virtually identical.)

		Frequency	Percent	Valid Percent	Cumulative Percent

weight_demo -- Post-strat Weights Based on Demo - weighting to match Bay Area demographics

wt_dem_99r -- weight_demo trimmed by 1%

wt_dem_95r -- weight_demo trimmed by 5% (Recommended)

weight_demo_loc -- weight_demo that also corrects for stratified sampling according to regional location (does not apply to Facebook ore referral samples)

PART II: Names (Alters) Variables

The names file consists of the alters named by the respondent (ego) in the name eliciting questions. Each alter is assigned the prim_key identifier as its ego, with a suffix of the name number, which is the ID variable, so that each record is an alter, for a total of 12,323 alters for the 1,159 egos. Because this file contains the ego prim_key unique identifier, one can merge additional ego variables to this file. The file does contain several variables from the main file: survey mode, agegroup, recruitment method (facebook or referral) and two weight variables (see documentation).

Please see the User documentation for further clarification about using the names file.

The color codings are the same as the main file: **purple font** indicates variables that are more than 33 values, and **green font** indicates variables that have been removed for confidentiality.

prim_key   **PRIMARY KEY - Respondent (Ego) unique identifier**
ID   **Alter's unique identifier that combines primkey and name_nmbr2**

name_number Number of name (within respondent case) – corrected

SECTION D – Questions asked only of subsample names. (Other alters are coded as missing data, blank, or zeros in these variables. A description of the algorithm that selected the subsample names appears in the instrument documentation.)

d1a Here is a list of ways that people meet. Which one of the following ways best describes how you first met [_____]]. Choose one. (asked only of subsample)

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	1.00 Same family by birth [for example, parents, children, siblings, cousins, etc.]	1217	9.9	29.5	29.5
	2.00 Same family by marriage [in-laws]	142	1.2	3.4	33.0
	3.00 Grew up in the same neighborhood	36	.3	.9	33.8
	4.00 Met in grade school or high school	217	1.8	5.3	39.1
	5.00 Met in college or postgraduate program	351	2.8	8.5	47.6
	6.00 Met as neighbors	219	1.8	5.3	52.9
	7.00 Met at work	542	4.4	13.1	66.1
	8.00 Met in church, synagogue, temple, or mosque	177	1.4	4.3	70.3
	9.00 Met in another group or organization	249	2.0	6.0	76.4
	10.00 Met through a friend	352	2.9	8.5	84.9
	11.00 Met through my spouse or partner	103	.8	2.5	87.4
	12.00 Met through my child	103	.8	2.5	89.9
	13.00 Met online, on the Internet	56	.5	1.4	91.3
	14.00 Other	339	2.8	8.2	99.5
	98.00 DK	2	.0	.0	99.5

Density Matrix Data: The variables below allow calculation of density measures for the subsample network and of centrality measures for individual alters. Each valid subsample name has an entry for his/her connection to each other alter (level of knowing as reported by the respondent), coded to the alters' <u>subsample numbers.</u> (The subsample ID number is fourth variable in the Names file). In a 5-person subsample, for example, the alter assigned subsample number 1 will have a value for each of his/her connections to alters with subsample numbers 2, 3, 4, and 5: n1_n2; n1_n3, n1_n4, n1_n5. Each nx_ny combination—each column for that combination—is filled in twice, once for filled in twice, once for nx and once for n*y*. So, for example, subsample name 5 will have an entry for n1_n5 as well (and for n2_n5, n3_n5, and n4_n5). Each connection is thus represented twice within each subsample network, one time each for side of the connection. All combinations not involving that Name are missing data. (E.g., subsample name 1 will have a missing data code for the column "n2_n3".)

Complications:

(1) We allowed volunteered "other" answers in the face-to-face condition. However, very few cases have such a code and our examination suggests that for the most part, these should be recoded to "3, don't know each other well."

(2) At this stage of the data-cleaning (Oct., 2017), some erroneous subsample Names have been removed from the Names file—perhaps 1% or so. (For example, an entry such as "my friends" or a duplicated entry.) However, the entries for the remaining Names' connections to those removed Names have not yet been corrected to missing data. (For example, if subsample Name 2 was removed, there are no data for that Name. However, the records for the alters still contain an entry for the connection to subsample Name 2 – e.g., a non-missing entry for n1_n2, n2_n3, etc. Users should identify such ego networks and correct accordingly.
